# *Contents*

<b>1 Least Squares Methods</b>	<b>1</b>
1.1 Introduction . . . . .	1
1.2 The Least Squares Algorithm . . . . .	2
1.3 Linear Least Squares Methods . . . . .	3
1.3.1 Batch Least Squares Method . . . . .	3
1.3.2 Sequential Least Squares Algorithm . . . . .	5
1.4 Non-Linear Least Squares Algorithm . . . . .	8
1.5 Properties of Least Squares Algorithms . . . . .	10
1.6 Examples . . . . .	11
1.6.1 Smooth Function Approximation . . . . .	11
1.6.2 Star Camera Calibration . . . . .	12
1.7 Summary . . . . .	19
<b>2 Polynomial Approximation</b>	<b>21</b>
2.1 Introduction . . . . .	21
2.2 Gram-Schmidt Procedure of Orthogonalization . . . . .	22
2.2.1 Three-Term Recurrence Relation to Generate Orthogonal Polynomials . . . . .	24
2.2.2 Uniqueness of Orthogonal Polynomials . . . . .	25
2.3 Hypergeometric Function Approach to Generate Orthogonal Polynomials . . . . .	30
2.3.1 Derivation of Rodrigues's Formula for Continuous Variable Polynomials . . . . .	34
2.3.2 Leading Coefficients for Three-Term Recurrence Formula . . . . .	36
2.4 Discrete Variable Orthogonal Polynomials . . . . .	38
2.4.1 Hypergeometric Type Difference Equation . . . . .	39
2.4.2 Derivation of Rodrigues's Formula for Discrete Variable Orthogonal Polynomials . . . . .	42
2.4.3 Leading Coefficients for Three-Term Recurrence Formula for Discrete Variable Orthogonal Polynomials . . . . .	44
2.5 Approximation Properties of Orthogonal Polynomials . . . . .	45
2.6 Summary . . . . .	48

<b>3 Artificial Neural Networks for Input-Output Approximation</b>	<b>49</b>
3.1 Introduction . . . . .	49
3.1.1 Radial Basis Function Networks . . . . .	50
3.2 Direction-Dependent Approach . . . . .	55
3.3 Directed Connectivity Graph . . . . .	60
3.3.1 Estimation Algorithm . . . . .	62
3.3.2 Spectral Decomposition of the Covariance Matrix . . . . .	64
3.3.3 Additive Decomposition of the Covariance Matrix . . . . .	66
3.3.4 Cholesky Decomposition of the Covariance Matrix . . . . .	66
3.4 Modified Minimal Resource Allocating Algorithm (MMRAN) . . . . .	69
3.5 Numerical Simulation Examples . . . . .	72
3.5.1 Test Example 1: Function Approximation . . . . .	73
3.5.2 Test Example 2: 3-Input 1-Output Continuous Function Approximation . . . . .	80
3.5.3 Test Example 3: Dynamical System Identification . . . . .	82
3.5.4 Test Example 4: Chaotic Time Series Prediction . . . . .	86
3.5.5 Test Example 5: Benchmark Against the On-Line Structural Adaptive Hybrid Learning (ONSAHL) Algorithm . . . . .	90
3.6 Summary . . . . .	93
<b>4 Multi-Resolution Approximation Methods</b>	<b>95</b>
4.1 Introduction . . . . .	95
4.2 Wavelets . . . . .	97
4.3 Bézier Spline . . . . .	105
4.4 Moving Least Squares Method . . . . .	110
4.5 Adaptive Multi-Resolution Algorithm . . . . .	112
4.6 Numerical Results . . . . .	116
4.6.1 Calibration of Vision Sensors . . . . .	116
4.6.2 Simulation and Results . . . . .	117
4.6.3 DCG Approximation Result . . . . .	119
4.6.4 Local Approximation Results . . . . .	121
4.7 Summary . . . . .	121
<b>5 Global Local Orthogonal Polynomial MAPping (GLO-MAP) in <math>N</math> Dimensions</b>	<b>123</b>
5.1 Introduction . . . . .	123
5.2 Basic Ideas . . . . .	125
5.3 Approximation in 1, 2 and $N$ Dimensions Using Weighting Functions . . . . .	128
5.4 Global-Local Orthogonal Approximation in 1-, 2- and $N$ -Dimensional Spaces . . . . .	136
5.4.1 1-Dimensional Case . . . . .	139
5.4.2 2-Dimensional Case . . . . .	140

5.4.3	<i>N</i> -Dimensional Case . . . . .	142
5.5	Algorithm Implementation . . . . .	144
5.5.1	Sequential Version of the GLO-MAP Algorithm . . . . .	146
5.6	Properties of GLO-MAP Approximation . . . . .	149
5.6.1	Approximation Error . . . . .	149
5.6.2	Bounds on Approximation Error . . . . .	150
5.6.3	Probabilistic Analysis of the GLO-MAP Algorithm . . . . .	152
5.7	Illustrative Engineering Applications . . . . .	155
5.7.1	Function Approximation . . . . .	155
5.7.2	Synthetic Jet Actuator Modeling . . . . .	160
5.7.3	Space-Based Radar (SBR) Antenna Shape Approximation . . . . .	166
5.7.4	Porkchop Plot Approximations for Mission to Near-Earth Objects (NEOs) . . . . .	170
5.8	Summary . . . . .	174
<b>6</b>	<b>Nonlinear System Identification</b>	<b>179</b>
6.1	Introduction . . . . .	179
6.2	Problem Statement and Background . . . . .	180
6.3	Novel System Identification Algorithm . . . . .	182
6.3.1	Linear System Identification . . . . .	185
6.3.2	State Variable Estimation . . . . .	189
6.4	Nonlinear System Identification Algorithm . . . . .	190
6.4.1	Learning Algorithm for State Model Perturbation Approach (SysID 1) . . . . .	190
6.4.2	Learning Algorithm for Output Model Perturbation Approach (SysID 2) . . . . .	197
6.5	Numerical Simulation . . . . .	199
6.5.1	Dynamic System Identification of Large Space Antenna . . . . .	199
6.6	Summary . . . . .	205
<b>7</b>	<b>Distributed Parameter Systems</b>	<b>207</b>
7.1	Introduction . . . . .	207
7.2	MLPG-Moving Least Squares Approach . . . . .	210
7.2.1	Poisson Equation . . . . .	214
7.2.2	Comments on the MLPG Algorithm . . . . .	220
7.3	Partition of Unity Finite Element Method . . . . .	222
7.3.1	Poisson Equation . . . . .	228
7.3.2	Fokker-Planck-Kolmogorov Equation . . . . .	235
7.4	Summary . . . . .	240

<b>8 Control Distribution for Over-Actuated Systems</b>	<b>243</b>
8.1 Introduction . . . . .	243
8.2 Problem Statement and Background . . . . .	245
8.3 Control Distribution Functions . . . . .	251
8.3.1 Radial Basis Functions . . . . .	254
8.3.2 Global Local Orthogonal Basis Functions . . . . .	255
8.4 Hierarchical Control Distribution Algorithm . . . . .	259
8.5 Numerical Results . . . . .	264
8.5.1 Control Allocation for a Morphing Wing . . . . .	264
8.6 Summary . . . . .	273
<b>Appendix</b>	<b>275</b>
